# Containers and FlexContainers

Colour Data Model using Containers and ContentInstances

Colour Data Model using FlexContainers and FlexContainerInstances

oneM2M Model: `org.onem2m.common.moduleclass.colour`

# FlexContainer scenario steps

1. Create a <flexContainer> [colour] specialization resource
2. Update a [colour] resource
3. Retrieve a <flexContainer> resource
4. Enable <flexContainerInstance> resource
5. Retrieve <flexContainerInstance> resources
